Text Classification with BERT – 1st April

Wednesday, 1 April 2026 6:04 PM

Text classification using BERT.

↳ Given a piece of text → predict its category.

Eg.
- This movie is amazing → Positive.
- worst product ever → Negative.

Real world application

- Sentiment analysis.
- Spam detection
- Intent classification
- News categorization

Why not traditional ML?

Before BERT., technique such as Bag of words or TF-IDF

Problem
- No understand of context
- Treat word independently.

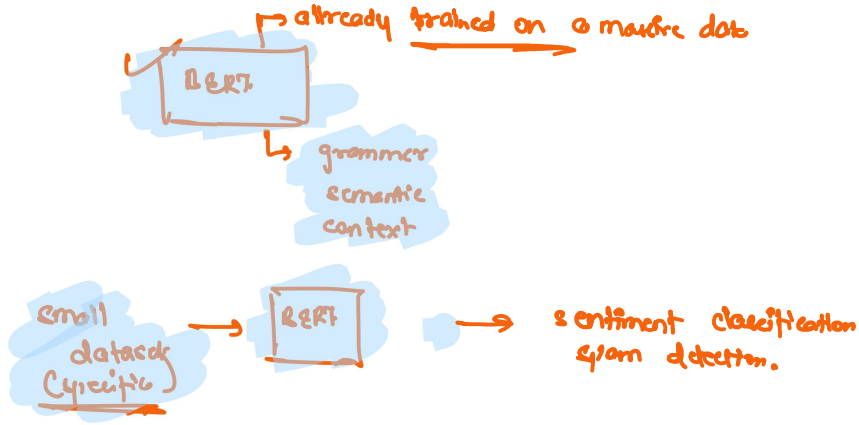
'not good' → model might think good → positive.

Why BERT. (Bidirectional Encoder Representations from transformers.

Context aware

Bidirection

Text

Eg. This movie is not good


- We need to fine-tune.
